Profile Summary

Frontend-focused B.Tech (IT) graduate with 6+ months of professional experience through freelance AI contribution at Outlier.ai and a data analytics training programme. Post-graduation, completed 2 years of intensive self-directed upskilling: built and deployed 4 real-world projects using React.js, Next.js, TypeScript, and JavaScript; solved 150+ DSA problems; and earned Google Cloud certifications. Strong grasp of component architecture, performance optimisation, and responsive UI design. Open to fresher and 0–1 year experienced roles in frontend, full-stack, or software engineering.

Education

Jaipur Engineering College and Research Center

Dec 2020 – Jun 2023

Bachelor of Technology – Information Technology

CGPA: 7.58 / 10

Key Skills

Languages: JavaScript (ES6+), TypeScript, C++, Java, Python (scripting)

Frontend: React.js, Next.js 14, HTML5, CSS3, SCSS/Sass, Tailwind CSS, Framer Motion, Lazy Loading, React Hooks

Backend & APIs: Node.js, REST APIs

Browser & Tools: Chrome Extensions API, WebRTC, Git, GitHub, Vite, Netlify, Vercel, VS Code

Concepts: DSA, OOP, Component Architecture, Performance Optimisation, Responsive Design, Web Vitals / Lighthouse

Databases: MongoDB, SQL

Experience

Freelance AI Contributor

Jun 2025 – Dec 2025

Outlier.ai

Remote

- Engineered 200+ training prompts for LLM fine-tuning across instruction-following, reasoning, and code-generation tasks — directly improving model output alignment.
- Reviewed and annotated 500+ AI-generated responses for quality, safety, and factual accuracy as part of RLHF (Reinforcement Learning from Human Feedback) pipelines.
- Designed adversarial and edge-case prompts targeting model failure modes, contributing to a ~15% improvement in contextual understanding scores on internal evaluation benchmarks.
- Collaborated asynchronously with a global team of 20+ contributors, maintaining consistent annotation standards across diverse task categories.

Data Analytics Training / Internship

Dec 2025 – Jan 2026

Zentek Infosoft

Jaipur, Rajasthan

- Completed a structured 45-day industry training programme focused on applied data analytics using Python and Excel in a live business environment.
- Wrote Python scripts to clean, transform, and consolidate datasets from multiple CSV and Excel sources, reducing manual data-preparation effort significantly.
- Built Excel reporting dashboards using VLOOKUP, pivot tables, and conditional formatting — reviewed weekly by senior analysts.

Self-Directed Learning & Project Development

Jun 2023 – May 2025

Independent (Full-time upskilling)

Jaipur, Rajasthan

- Took a deliberate post-graduation period to close skill gaps in frontend development and software engineering before entering the industry.
- Built and deployed 4 production-grade projects spanning Chrome extension development, SaaS landing pages, freelance agency websites, and a live portfolio — all publicly accessible.
- Solved 150+ DSA problems across LeetCode, GeeksforGeeks, and Coding Ninjas; maintained a 100+ day streak with strong coverage of arrays, trees, graphs, and dynamic programming.
- Earned Google Cloud Essentials certification and completed Cloud Security Challenge Levels 1 & 2 — hands-on GCP lab experience in compute, IAM, and cloud security.

Projects

LinkedIn Dev Filter | *React.js, TypeScript, Vite, Chrome Extensions API, JavaScript* | [GitHub](#)

- Built a Chrome extension that intelligently filters LinkedIn feeds — removes irrelevant and promotional posts in real time, surfacing only developer-relevant content and hiring posts.
- Implemented a keyword pre-seeding and DOM-caching algorithm that intercepts and classifies feed posts before render — achieving near-zero layout shift and smooth filtering without page reload.
- Designed an intuitive React-based popup UI for keyword management, filter toggles, and mode switching — fully operable without leaving the LinkedIn tab.
- **Result:** Reduced developer feed noise by ~80% — significantly improving signal-to-noise ratio for job seekers and engineers actively monitoring hiring posts.

TechBlaz — IT SaaS Company Website | *React.js, SCSS/Sass, Advanced React Hooks* | [Live](#) [GitHub](#)

- Developed a complete frontend website for an IT SaaS company — includes a home page, services section, and a fully functional contact form with validation.
- Architected the UI using advanced React hooks (useCallback, useMemo, useRef) and optimised re-render cycles — achieving a ~40% improvement in component render performance measured via React DevTools.
- Styled entirely with SCSS using modular, BEM-structured stylesheets — maintaining design consistency across responsive breakpoints with zero CSS framework dependency.
- **Result:** Achieved 90+ Lighthouse performance score on Vercel deployment — validated via Lighthouse audit with optimised LCP, FID, and CLS scores.

Staflance — Freelance Agency Landing Page | *React.js, JavaScript, HTML5, CSS3* | [GitHub](#)

- Built a third-party hiring and freelance agency website as a freelance project — includes an invite-style landing page, live job posting section, and a contact form for agency inquiries.
- Implemented a dynamic job listing page where roles can be added and filtered client-side — designed to serve as a lightweight alternative to a full CMS for small agencies.
- Focused on conversion-optimised UI/UX: clear CTAs, fast load times, and mobile-first responsive layout across all sections.

Certifications & Achievements

Google Cloud Essentials | *Google Cloud Platform*

- Completed hands-on labs covering core GCP services, IAM, compute infrastructure, and cloud storage — verified badge awarded.

Google Cloud Security Challenge — Level 1 & 2 | *Google*

- Completed both levels covering identity management, access control, and cloud security best practices — official Google recognition received.

LeetCode & DSA Streak | *150+ Problems Solved*

- Maintained 100+ day active streak across LeetCode, GeeksforGeeks, and Coding Ninjas — strong across arrays, trees, graphs, and dynamic programming.
